

At a Glance

erwin EA Agile delivers enterprise architecture (EA) and change analysis, allowing you to manage complex EA models to drive business transformation. erwin EA Agile enables business and technical stakeholders to get a complete and contextual view of their architecture assets to plan, govern and manage change with greater agility, efficiency and cost effectiveness while mitigating business transformation risks. The core of the cloud-based erwin EA Agile platform is collaboration and ease-of-use.

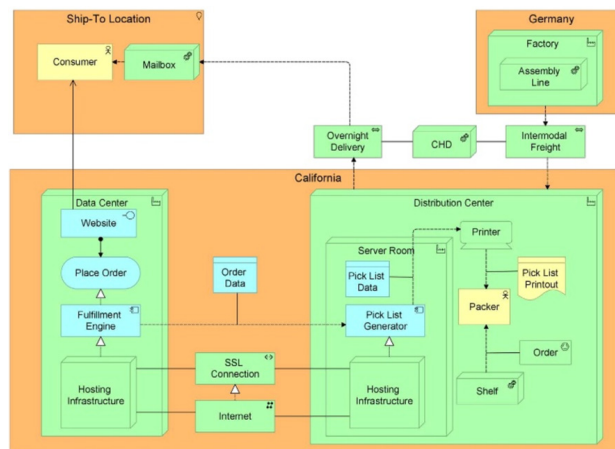

KEY BENEFITS/RESULTS

- Align business and IT with consistent design, documentation and communication of architecture assets
- Understand the full impact of changing business and IT capabilities in support of strategic decision-making
- Model and integrate complex goals, strategy, process, application, business and technology architectures
- Collaborate around transformation initiatives, engaging all stakeholders

BUSINESS CHALLENGES

Increasing amounts and complexity of enterprise data coupled with digitalisation has made understanding and managing change both challenging and important. Making data-backed decisions is vital for increasing quality and performance while reducing cost.

Organisations are always looking for new ways of innovating and growing through differentiation. However, this is risky, and goals, strategies, capabilities and infrastructure must be carefully aligned with full stakeholder engagement.

KEY FEATURES

- High Usability - Web-based intuitive tool allowing you to work from anywhere and get up and running quickly
- No Implementation required - Delivered via scalable SaaS with product updates done automatically behind the scenes
- Stakeholder Collaboration - Communities, comments, tasks, mentions, PDF publication, invitation viewing, heat-maps and Kanban boards allows for full engagement
- Growing Ecosystem - Multiple integrations and an open API means you can connect and transfer data from your other strategic planning and modeling tools
- Road-mapping - See where you are today and what is coming up
- Method Support - ArchiMate[®] 3.0 with TOGAF support for consistent EA content
- Overcome silos that impede effective stakeholder collaboration - Supports the BPMN 2.0 modeling notation
- Drag-and-drop editor or auto-build diagrams with representational consistency
- Visualisation of complex enterprise architecture assets
